When the 1st German Inverted Classroom Conference was staged in 2012, the organizers thought that it may have been the first and last conference of this kind: Too few teachers seemed to be familiar with this model in the first place and only a tiny fragment of them would actually apply this model to their own teaching scenarios. However, in the 2013 conference, we were overwhelmed with a large number of teachers who not only wanted to find out about this teaching and learning concept but had already used it. Consequently, the focus of the 2nd German Inverted Classroom Conference to which this conference volume is

dedicated was no longer the “installation” of the Inverted Classroom Model (ICM) but fine adjustments in the actual application of it. This is reflected in the contributions to this volume. Even though all three central aspects of the ICM are addressed, (1) content production and delivery, (2) testing, and (3) the in-class phase, there has been a shift away from mere content production towards an expansion of the model as well as a move towards fine adjustments of the three components. In this important book, Nicholas Hartlep and Daniel Scott’s detailed analyses on both visual and historical representations of Asian Americans in textbooks and teacher manuals used in our elementary and secondary schools poignantly tell us that generations of children are growing up being fed this single story about Asian Americans. As Hartlep and Scott write. Asian Americans have once again been constructed as the “good minority” that can succeed on their own and be used as a political instrument to shame the Blacks for their underachievement and their fight for equality. Over and over again, the media has been telling “a single story” about Asian Americans to the public for the past fifty years. The consequence of this fabricated story is that it “discourages others—even Asian-Americans themselves—from believing in the validity of their struggles” (Linshi, 2014, p. 1).

The First Conference on the History of Nordic Computing (HiNC1) was organized in Trondheim, in June 2003. The HiNC1 event focused on the early years of computing, that is the years from the 1940s through the 1960s, although it formally extended to year 1985. In the preface of the proceedings of HiNC1, Janis Bubenko, Jr. , John Impagliazzo, and Arne Sølvberg describe well the peculiarities of early Nordic computing [1]. While developing hardware was a necessity for the first professionals, quite soon the computer became an industrial product. Computer scientists, among others, grew increasingly interested in programming and application software. Progress in these areas from the 1960s to the 1980s was experienced as astonishing. The developments during these decades were taken as the focus of HiNC2. During those decades computers arrived to every branch of large and medium-sized businesses and the users of the computer systems were no longer only computer specialists but also people with other main duties. Compared to the early years of computing before 1960, where the number of computer projects and applications was small, capturing a holistic view of the history between the 1960s and the 1980s is considerably more difficult. The HiNC2 conference attempted to help in this endeavor.

pervasive in popular culture. In this collection of new essays, scholars from a range of fields explore representations of mental illness and disabilities across various media of popular culture. Contributors address how forms of psychiatric disorder have been addressed in film, on stage, and in literature, how popular culture genres are utilized to communicate often confusing and conflicted relationships with the mentally ill, and how popular cultures around the world reflect mental illness and disability. Analyses of sources as disparate as the Batman films, Broadway musicals and Nigerian home movies reveal how definitions of mental illness, mental health, and of psychology itself intersect with discourses on race, gender, law, capitalism, and globalization. What ethical considerations should guide war's settlement and its aftermath? In cases of protracted conflicts, recurring war, failed or failing states, or genocide and war crimes, is there a framework for establishing an enduring peace that is pragmatic and moral? Ethics Beyond War's End provides answers to these questions from the just war tradition. Just war thinking engages the difficult decisions of going to war and how war is fought. But from this point forward just war theory must also take into account what happens after war ends, and the critical issues that follow: establishing an enduring order, employing political forms of justice, and cultivating collective forms of conciliation. Top thinkers in the field—including Michael Walzer, Jean Bethke Elshtain, James Turner Johnson, and Brian Orend—offer powerful contributions to our understanding of the vital issues associated with late- and post conflict in tough, real-world scenarios that range from the US Civil War to contemporary quagmires in Afghanistan, the Middle East, and the Congo.
