The Dynamics of Industrial Collaboration revisits and reformulates issues previously raised by inter-firm collaboration. The latest research in collaboration, processes and evaluation of cooperation, and industrial and research networks, is

presented by way of both empirical and theoretical studies. The authors use several theoretical perspectives to explain inter-firm and inter-institutional collaboration: the theory of transaction costs and contracts, evolutionary theory, and the resource-based view. The book illustrates that none of these approaches are dominant. Knockout interview answers is a collaboration between best-selling business author Ken Langdon and human resources specialist Nikki Cartwright. Unlike the majority of interview techniques books this book steers clear of blindingly obvious advice such as not to wear track-suit bottoms or turn

up drunk to your interview, and instead provides a way into the mind of the interviewer so that you can spot the likely questions and know how to answer them differently depending on the perspective of the interviewer. skills. While there is growing evidence of the importance of marine ecosystems for our societies, evidence shows also that pressures from human activities on these ecosystems are increasing, putting the health of marine ecosystems at stake worldwide. Hence, Blue Economy is becoming an important component of future socio-economic development strategies (e.g. this is called Blue Growth in Europe), that eventually can result in increasing pressures at sea, and despite the current regulatory framework (in particular with the Oceans Act, in USA or Canada, and the Marine Strategy Framework Directive, in Europe), it is likely

that this situation will continue in the future. Ensuring all those connected to the sea, directly or indirectly, gain a better understanding of the importance of the seas, the human-sea interactions and opportunities to act better and reduce impacts from human pressures, is central to Ocean Literacy (OL). Receiving increasing attention in Europe and USA, OL is a challenge for all parts of society: educators & trainers, children and professionals, civil society and scientists, consumers and policy/decision makers. It is seen as part of the package of solutions that will lead to a change in behavior and practice, thus reducing impacts

and resulting in healthier marine ecosystems, whilst allowing development opportunities offered by seas are seized in a sustainable manner. This Research Topic focuses on the issues and options for effective OL worldwide. It discusses: (1) existing experiences in OL (formal and informal education for children, training for professionals, tools for raising awareness of consumers - and of investors in the marine sectors...) and their effectiveness (from understanding better to acting differently); (2) the role OL could play (in interaction with innovation, regulation, economic incentive, social

norms...) to support human capital development as key component of sustainable growth; and (3) pre-conditions for effective OL for different sectors and target groups. Questions relevant to OL include: Which knowledge - produced by whom - to share and how? Who to target - and how to effectively reach those targeted? How to design OL initiatives - including by mobilizing those targeted (via living lab approaches e.g.) - to ensure effective OL and pave the way for behavior change? What are the knowledge gaps that limit our capacity to design effective OL? As scientists, it is likely you have many more questions to offer

and discuss. This text explains the principles of IT-related project management, including project planning, monitoring and control, change management, risk management, and communication between project stakeholders. The idea of interculturality being an essential part of a language learner's toolkit is widely accepted. Less certain is exactly what interculturality is and how to determine who has it, who does not have it and, importantly, how to get it: this book is concerned with these questions. The work presented here explores the concept of intercultural communicative competence as an aim of

foreign language learning. It examines in particular the role of student mobility and how short stays abroad affect higher education students' perceptions of their development of this complex competence. It explores the coinage of the term intercultural communicative competence and the current debate regarding its definition, usage and usefulness. The work then moves on to describing an empirical study in which students who are studying English at a German university participate in an eight-week short stay abroad to the English-speaking world and are asked about their perceived development of intercultural

communicative competence and the ways in which their expectations for the stay abroad are met. Developing intercultural communicative competence is an institutional aim of the stay abroad, and therefore the ways the participants make sense of this competence are of interest. Through case study research and quantitative questionnaires data are gathered, analysed and described. The study shows that even a short stay abroad helps develop intercultural communicative competence albeit in individually different ways. Towards a Universal Justice? teachers' resources and updates The aim of this book is to analyze the relationship between renewable energy sources and citizens, focusing both on demand and supply. Today, the consequences regarding the use of fossil energy are seen from a different perspective because the issues related to climate change are evident worldwide. Thus, climate change and resource depletion are real problems to be addressed for the welfare of society. Renewable energy sources (RES) are essential to reduce polluting emissions, but they can produce a range of environmental effects which might be detrimental to human

activities as attested by the several types of the Nimby effect (“Not In My Back Yard”). This is because infrastructure siting usually offers different pros and cons to stakeholders and the local populations affected. Nevertheless empirical evidence shows that in many countries, society is willing to pay a significant amount to facilitate adoption of renewable technologies. With RES, citizens are called on to play a dual role - not only that of end consumers but often also stakeholders in the local production process. In this book we try to deal with this dual role played by the citizens to evaluate the actual public acceptance of RES. We address

a specific and important area of the economic analysis: willingness to pay (WTP) and willingness to accept (WTA). The research evaluates the attitude of citizens towards the end use of green energy by investigating the likelihood of acceptance of a new infrastructures related to RES production. The book, therefore, is not about how to reconcile consumers and citizens, rather it explores the main determinants of peoples' behavior for a better understanding of this phenomenon. Congratulations on your new job as an information security officer! What does this responsibility actually entail? How will you

manage not to get bogged down? How are you going to keep all the relevant issues in mind? How will you get started? This book is intended to help you take a holistic approach to information security while retaining an overview of the topic. Its primary aim is to impart the essentials of the IT-Grundschatz approach - both as theory and practice - as per the BSI standards 200-x. This book not only serves as a practical guide to basic protection but also allows you to understand the procedure on your own computer as a mini scenario. Another focus is on awareness-raising trainings for employees of your institution

targeted at specific groups. These trainings will need to be individually initiated, planned, implemented, and evaluated. We deal with the relevant technical and organizational aspects and focus on a discursive learning atmosphere devoted to interpersonal exchange, experience-oriented learning scenarios, and practical demonstrations designed to achieve a sustained effect and benefit all employees. Have fun reading and good luck with implementing the ideas! This book explores the absent and missing in debates about science and security. Through varied case studies, including biological and chemical

weapons control, science journalism, nanotechnology research and neuroethics, the contributors explore how matters become absent, ignored or forgotten and the implications for ethics, policy and society. This collection of chapters focuses on the regulation of the British economy in the long eighteenth century as a means

to understand the synergies between political, social and economic change as Britain was transformed into a global power. Inspired by recent research on consumerism and credit, an international team of leading academics examine the ways in which state and society both advanced and responded to fundamental economic changes. The studies embrace all aspects of the regulatory process, from developing ideas on the economy, to the passage of legislation, and to the negotiation of economic policy and change in practice. They range broadly over Britain and its empire and also consider Britain's exceptionalism through comparative studies. Together,

the book challenges the general characterization of the period as a shift from a regulated economy to a more laissez-faire system, highlighting the uncertain relationship between the state and economic interests across the long eighteenth century.
